AI services for your business

Practical automation, focused AI security reviews, and guidance to build your own business apps. Work directly with Jay from KAIDIGITAL, face to face over Google Meet in English, Spanish or German.

AI Automation for Your Business

Connect your existing tools and reduce repetitive work. We start with one workflow and agree what a useful result looks like before implementation.

• **From USD 750:** one focused workflow, up to two agreed integrations, agreed test cases and a documented handover.

• Possible starting points include request triage, document preparation, internal reporting and human-reviewed follow-up. These examples are scoped individually.

• Third-party subscriptions, hosting, API usage, additional integrations, data migration and ongoing support are priced separately.

AI Security Audit

Understand risks in how your AI application or agent handles data, permissions and connected tools.

• **From USD 490:** a focused configuration, permission and data-flow review for one AI app or agent and one workflow, a prioritized findings report and a walkthrough.

• The report documents evidence, impact, recommended actions, review limits and untested areas. Relevant topics may include prompt injection exposure, sensitive information and excessive permissions.

• Active testing, source-code review, remediation and retesting require a separate scope and quote. Written authorization is required before testing. This is not certification or a guarantee that all vulnerabilities will be found.

Custom Business Apps

Build your own app with expert guidance. You work on a real business need while learning how the parts fit together, how to test changes and how to keep customizing your tool. Done-for-you development remains available under a separate quote.

Guided app building

A practical learning engagement centered on one useful tool for your business. The goal is to help you understand and continue improving what you build.

Option	Live time	USD
Focus Session	60 minutes	249
Build Workshop	120 minutes	399
Guided Build Program	4 sessions of 90 minutes	990

Choose your first step

Focus Session: clarify one goal, choose tools or work through a specific build problem. Leave with a focused action plan and a written next-step checklist.

Build Workshop: map one workflow and work on your app together. Includes guided building, testing or troubleshooting, with notes and a next-iteration plan.

Guided Build Program: six live hours for one agreed app. Define the first version, build its core flow, test realistic cases, then practice making changes with a continuation plan.

What you need

Bring a desktop or laptop, access to your own selected tools, and examples with sensitive data removed. No programming background is required to start; progress depends on scope, preparation and practice. You retain access to the editable work in your accounts, subject to third-party licenses.

Scope and payment

Prices are one-time in USD. Applicable taxes, software subscriptions, hosting and API usage are additional and disclosed before purchase. A finished production app, revenue or savings are not guaranteed. Extra features, implementation and ongoing support require a separate agreement.

Individual sessions may be purchased through their published PayPal links. We verify payment and confirm the appointment by email. Cancel at least 24 hours before the confirmed start for a full refund; within 24 hours, rescheduling only, subject to applicable rights. Program scope, schedule and cancellation terms are agreed in writing before payment.

ClientRain is operated by KAIDIGITAL SPA in Chile. Current details and policies: client-rain.com/terms/. Prices updated October 23, 2026.
